Top Tips for Dressing

Sensory Processing

Issued by the Paediatric Occupational Therapy Department

Children who experience challenges with their sensory processing can often find dressing very difficult. They may struggle to tolerate different clothing materials or find the seams on the inside of clothing, such as socks and underwear, unmanageable.

Here are some helpful strategies to help support children with dressing:

Preparing your child for dressing:

- Before getting dressed, have your child engage in some heavy work activities. For example, encourage pushing and pulling heavy objects, such as a laundry basket or toy box, back and forth across the floor. This will help to get their bodies ready and focused for dressing.
- Deep-pressure activities can help calm their nervous system. Try activities such as:
 - A firm massage before getting dressed.
 - A firm scalp massage can be helpful to help tolerate wearing a hat.
 - Bear hugs with firm pressure whilst rocking gently back and forth.
 - Sit facing one another with the soles of your feet touching and holding hands whilst gently pulling and pushing backwards and forwards and singing along to Row, Row, Row Your Boat.

- Try sucking a thick liquid, such as a smoothie or yoghurt, through a straw.
- Allow plenty of time to get ready in the mornings.
 - Pick out clothing ahead of time.
 - Encourage your child to be involved in the selection of clothing options.
- Seasonal wear advice:
 - Transitions between seasons - consider using social stories to help ensure children pick appropriate clothes for the weather.
- Consider reducing audio and visual distractions.
 - Turn off the TV or radio.
- Some children with sensory processing challenges may struggle with their balance.
 - Encourage your child to sit during dressing so that they can concentrate on getting ready rather than trying to maintain their balance.

Clothing consideration

- Try cutting out labels in clothing or buy clothing without tags.

- Consider flipping undergarments and socks inside out to allow any uncomfortable seams to be worn on the outside of the body.
- Consider purchasing seamless socks/underwear designed to reduce irritation.
- Some synthetic fabrics can be difficult to tolerate try to buy softer fabrics like cotton, fleece, and flannel where possible.
- Some children prefer wearing tighter fitting garments. Consider trying base layers underneath your child's clothes this can provide a calming influence.
- If tolerating stiff clothing is an issue, consider drying clothes in a tumble dryer.
- Some children prefer well-worn clothes, try washing clothing multiple times to soften the material or use clothes that are second-hand or handed down.
- If your child is sensitive to smell, consider using a washing powder and a fabric softener that is unscented.

Alternative consideration:

- Please also remember a large percentage of dressing difficulties are related to our tactile system being hypersensitive to touch. Therefore, encouraging children to engage in a range of sensory-based play activities can be very helpful.
